

SCGP Ranked in the Top 1% by S&P Global for Packaging Industry, Driving Circular Economy at Earth Jump 2025 Forum

SCGP has reaffirmed its leadership in global sustainability, securing a position in the Top 1% of the S&P Global Sustainability Rankings for the third consecutive year. As part of its commitment to advancing the circular economy, SCGP showcased its innovative packaging solutions at the “EARTH JUMP 2025: TRANSITION THRU TURBULENCE” sustainability forum.

Mr. Wichan Jitpukdee, Chief Executive Officer of SCG Packaging Public Company Limited or SCGP, stated that the company's continuous efforts with partners to promote the Circular Economy, strive for Net Zero, and develop workforce capabilities aligned with organizational direction have enabled SCGP to remain resilient in the face of global challenges. Recently, SCGP has actively contributed to advancing Thailand's economy amid the global climate crisis, preparing to face transformative challenges at the sustainability forum “EARTH JUMP 2025: TRANSITION THRU TURBULENCE” in a panel discussion, “Circular Economy and Waste Management – An Unmissable Climate Solutions.”

“The Circular Economy is becoming increasingly vital and serves as a key survival strategy for businesses amid today's global uncertainties. SCGP has embedded circular economy principles into its corporate strategy across five main areas to drive sustainable growth. First, SCGP focuses on **Resource Recovery** by reusing materials and sourcing over 99% of its paper from recycled content. It also emphasizes **Circular Supplies**, employing renewable energy and managing forest plantations that absorbed more than 300,000 tons of carbon last year. Additionally, the company designs packaging with **Product Life Extension**, helping reduce resource consumption by prolonging product usability. These three pillars have driven SCGP's strong and sustainable growth, enabling the company to further expand into two additional areas that enhance future resilience and sustainability. SCGP is expanding into **Product as a Service**, transforming products into integrated service offerings to boost value chain efficiency. Furthermore, through a **Sharing Platform**, SCGP collaborates with partners to share assets, maximizing resource utilization and value creation.”

“Considering the Circular Economy as an investment in the future rather than a cost can unlock new business opportunities. It requires actively seeking partnerships to build collaborative ecosystems and drive real impact. SCGP currently works with over 120 business partners and engages communities by promoting waste management and recycling knowledge. This effort has led to the development of the ‘Community LIKE (Zero) Waste’ project, which has earned national awards in four communities. Alongside these initiatives, SCGP continues to invest in sustainable packaging innovations, such as Paper Cutlery, including spoons, forks, and knives made from paper, and eucalyptus fiber-based foodservice packaging that is both recyclable and biodegradable within 60 days after disposal,” said Mr. Wichan.

At the EARTH JUMP 2025 forum, representatives from various sectors came together to exchange approaches for advancing the circular economy, covering waste management, expanding collaborations, and building partnership networks. These efforts aim to drive business sustainability and deliver benefits to society. The forum served as a key platform for sharing circular economy strategies with businesses and diverse stakeholders to promote balanced growth across the economy, culture, and the environment, working collectively towards global sustainability.
