

## SCGP Recycle Leads Network of 22 Partners to Achieve LESS Certification Promoting Circular Economy and Sustainable Development

The Thailand Greenhouse Gas Management Organization (Public Organization) or TGO, represented by Nakorn Tangavirapat, Executive Director, together with SCGP, presented certificates and trophies of recognition to a network of 22 partner organizations participating in the “Old For New” project. The initiative represents a collaborative effort to systematically manage used paper by returning it to the recycling process, with measurable greenhouse gas emission reductions certified under the Low Emission Support Scheme (LESS).

Danaidej Ketsuwan, Chief Financial Officer and in charge of Packaging Materials Recycling Business, SCGP, stated that the “Old For New” project is one of SCGP Recycle’s key initiatives aimed at fostering collaboration with organizations across various sectors. The project promotes waste materials segregation at sources into the recycling process to produce new paper through environmentally friendly manufacturing processes. This is carried out under efficient resource and waste management practices aligned with the Circular Economy Principles, helping reduce the consumption of virgin resources, minimize waste generation, and mitigate environmental impacts.

SCGP Recycle has further elevated the project to obtain certification under the Low Emission Support Scheme (LESS) in the waste management category. This credible certification clearly reflects tangible greenhouse gas emission reductions achieved through waste management and recycling operations. As a result, 22 partner organizations from diverse sectors have shown interest and joined the project to enhance recycling efficiency and contribute to emission reductions, supporting sustainable development goals and advancing the Circular Economy. SCGP extends its congratulations and appreciation to all participating organizations for their commitment to jointly driving Circular Economy practices and sustainable development. Through the project’s implementation and collaboration, greenhouse gas emissions were reduced by more than 4,027,060 kilogram carbon dioxide equivalent during the activity period from January 1, 2024 to September 30, 2025, in accordance with the assessment criteria under the Low Emission Support Scheme (LESS).

SCGP Recycle plans to expand the “Old For New” partnership network to include organizations from a wider range of industries in order to further increase recycling rates, optimize resource utilization, and continuously reduce greenhouse gas emissions. Organizations interested in joining the project can contact +66 2-586-5555 ext. 5 for more information.
